

Trailer Movement Deterrents

How they work

The SuzieLok and PalmLok are simple-to-fit trailer movement deterrents, incorporating an integrated lock. Yellow VOR ring is optional if a highly visible indicator is desired. The SuzieLok is designed for UK trailers whereas the PalmLok is specifically designed for EU trailers.

The units lock onto the air line and prevent coupling, thereby restricting unauthorised trailer movement. Apart from theft considerations, immobilising the trailer can be a helpful Health & Safety aid, e.g. preventing the trailer from being hitched up or moved if a forklift is unloading at the dock.

They provide a key-protected barrier to movement of the trailer. These devices have widespread use across all logistic operations that employ effective trailer management, maintenance/MOT schedules, and theft deterrent measures.

Optional VOR ring

SuzieLok for UK trailers

PalmLok for EU trailers

Key features & Benefits

SuzieLok is used for UK trailers, PalmLok has been designed specifically for EU trailers;
Manufactured with tested materials for guaranteed reliability and durability;
Two keys per lock as standard, extras can be ordered;
SuzieLoks and PalmLoks use the same lock barrel, so mixed fleets can use one key profile if required;
Can be supplied with universal fleet key or individual keys at no additional cost.
